## Frequently Asked Questions

**Q. What is a Heating Degree Day?**

A.  $65 - ((\text{Daily Low Temp} + \text{Daily High Temp}) / 2)$

**Q. Do I enter the daily degree day or the cumulative total?**

A. Daily degree days are used and cumulative totals are calculated between fills.

**Q. Where do I get the daily degree days?**

A. A good place to look is the website for a local news channel. Another option is <https://www.degreedays.net/>. Otherwise, it can be calculated manually.

**Q. How much history do I need to keep?**

A. Keep at least a year prior to heating season. Go back far enough to cover the last fill for any scheduled delivery tank. Up to 1000 days can be stored.

**Q. What do I do when I run out of space?**

A. Highlight Row 1 and drag down to highlight about a year's worth of entries. Press the **Delete** key then select **Save**.
