Sales Tax Exemptions

Last Modified on 07/28/2023 4:15 pm CDT

If taxable products are being sold but some customers are tax exempt, the various tax exemption reasons are defined at Setup / A/R / Sales Tax Exemptions. These reasons are then used at the *Invoicing* screen to explain why sales tax is not being charged.

Setup

1. Select Add. On the Tax Exempt Code window, add a Tax Exempt ID.

- 2. Any *Notes* that are added are for internal use only. Information can be added about the exemption such as why it was set up or what is required to use this exemption.
- 3. The Sales Tax Exemption Message prints on Invoices if the Print Sales Tax Exemption Message option is selected at Setup / Location Preferences / Invoice Printout.
- 4. Select Save.

Using a Sales Tax Exemption

There are two ways to select a Sales Tax Exemption.

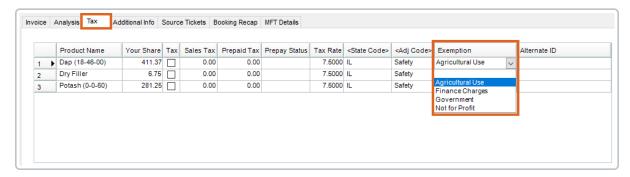

1. In the *Product* grid on the Invoice, right-click the *Tax* checkbox and a screen appears with the previously defined exemption reasons listed. Choose the reason that applies.

2. Select the Sales Tax Exemption reason on the Invoice's *Tax* tab, and choose the applicable reason in the *Exemption* column.

Note: If the *Tax* checkbox is selected on the *Tax* tab, it must be unchecked to be able to choose the *Exemption* from the drop-down. Alternatively, right-click the *Tax* checkbox on the *Invoice* tab to select the exemption reason.

Save the Invoice, and tax will not be applied for the items with the *Tax* column unchecked.

These exemption reasons are summarized on the Sales Register and Sales Tax Summary reports for sales tax reporting.
