

Importing or Drawing a Field Boundary - SKY Mapping

Last Modified on 04/01/2026 3:24 pm CDT

Field boundaries can be imported as a shape file or manually drawn using the SKY Mapping drawing tools. A boundary must be added to the field before saving.

Importing a Boundary

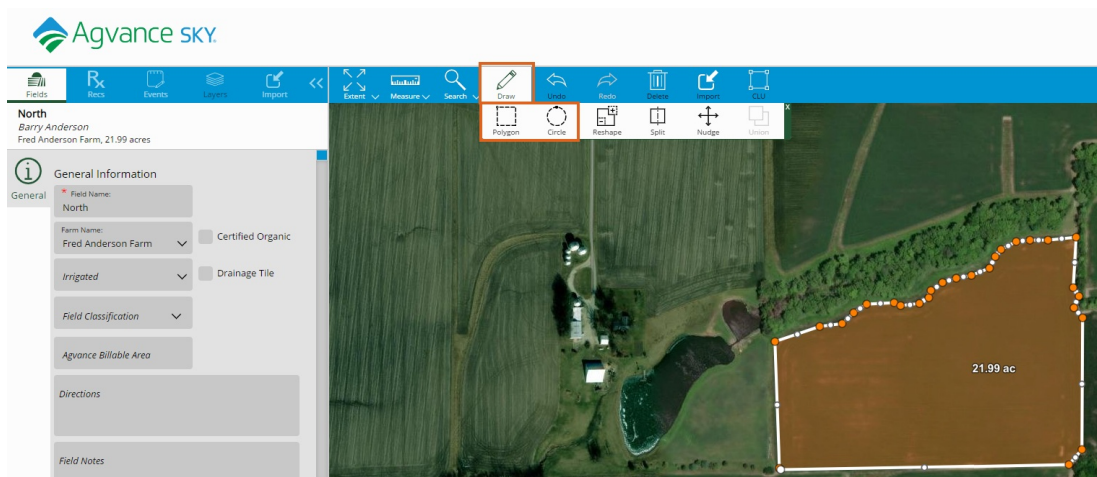

1. Select **Import**.
2. Select the shapefile for the Field being added and choose **Open**.

3. Make any needed boundary adjustments and select **Save**.

Drawing a Boundary

1. Select **Draw**.
2. Select the polygon or circle tool and trace around the field boundary.

3. Double-click to close the boundary.
4. Select **Save**.
