

Background Imagery

Last Modified on 05/31/2024 9:43 am CDT

There are two options for background imagery.

Option One (Recommended)

Background imagery can be set up either at *Mapping / SSI / Mapping Preferences* or *Hub / Setup / Mapping Preferences* by selecting the *Use Bing* options for Bing Roads data and Bing Imagery. If the *Use Bing* option is selected for the *Background Road Folder*, the *Use Bing* option for the *Background Image Folder* will automatically be selected.

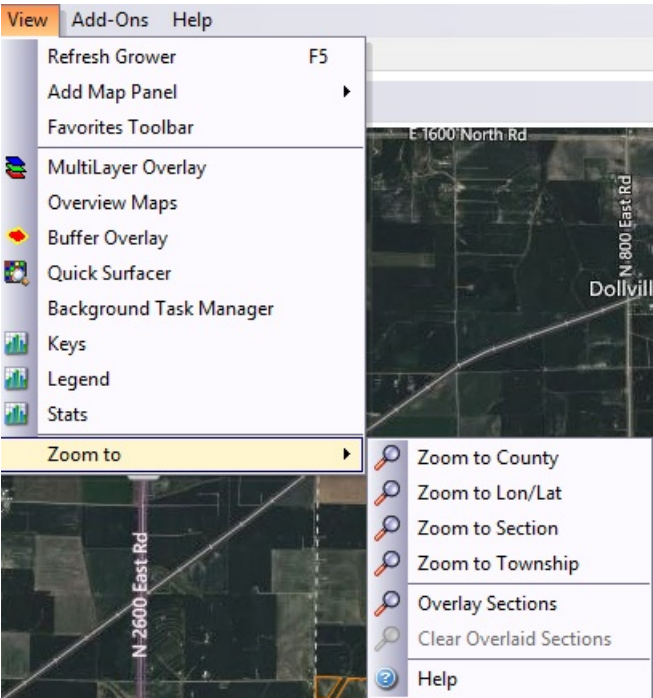

Option Two

Note: This can be used when there is no live internet connection, or there is an internet connection that will not support Bing Imagery on the Mapping machine.

An *NAIP Imagery* option is available. For more information on NAIP Imagery, review [Download NAIP Imagery](#).

Note: If imagery is set up but the background is not visible, the selected Customer may not have a georeferenced point or boundary for Mapping to reference. In order to find imagery to draw a boundary or look for a Field, go to *View / Zoom to*. This tool has options to *Zoom To County, Lon/Lat, Section, or Township*.

If imagery is set up and the boundary of the Field is visible but the background imagery is not, the *Background* imagery may be turned off on the Mapping tool bar.

When this option is selected, background imagery should be visible.
