

API Security

Last Modified on 01/22/2024 9:58 am CST

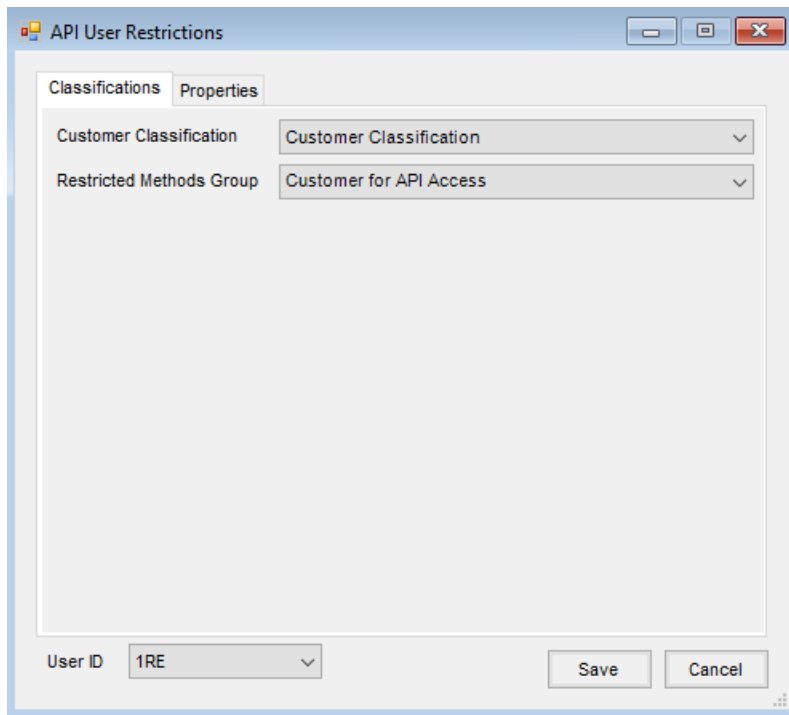

Agvance API Security is set up and maintained per Agvance user with access to the API.

Setup

In the *Admin Utilities*, for databases with an API Database ID established as well as valid connection information set up in the API, go to *Hub / API Security*.

In the *User ID* drop-down, select the Agvance User ID requiring restrictions.

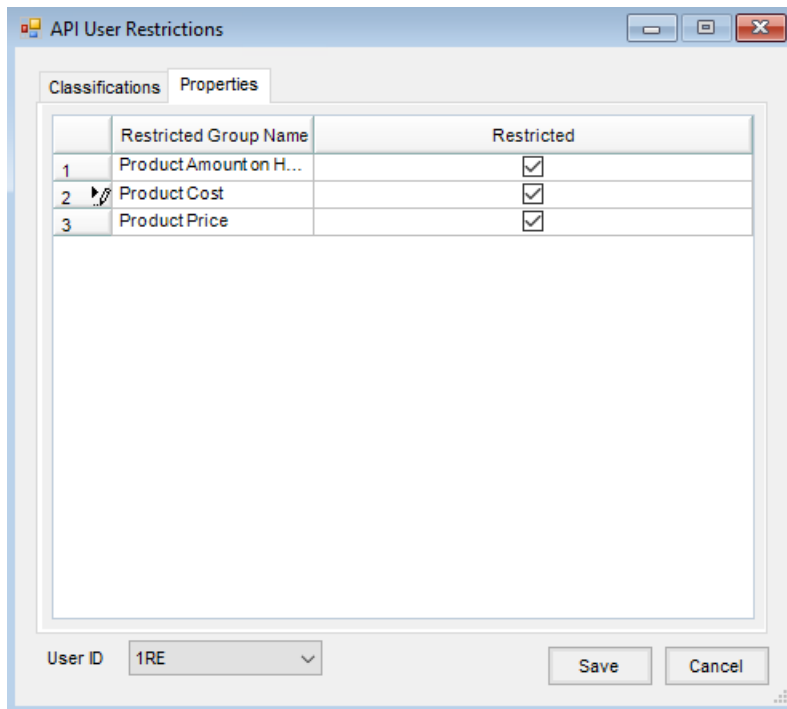

Select the *Customer Classification* that will restrict the list of customers returned in the following API Methods:

- GET Customer – GetCustomer()
- POST Customer – GetCustomerDetailList()
- Post CustomerList – GetCustomerList()

Note: Options available under the *Restricted Methods Group* are hard-coded. Contact SSI Support for more information.

Restricted Properties

The *Product Amount on Hand* restricts the following properties in the following methods:

1. Amount On Hand, End of Month Balances, Lot Number Balances
GET Product - GetProduct()
POST ProductList - GetProductList()
2. Product Cost (Including all formulas that calculate from this cost or extension)
GET Product - GetProduct()
POST ProductList - GetProductList()
3. Product Price (Including all formulas that calculate this price or extension)
GET Product - GetProduct()
POST ProductList - GetProductList()
GET DeliveryTicket - GetDeliveryTicket()
GET BlendTicket - GetBlendTicketByTicket() (Includes Analysis)
GET BlendTicket - GetBlendTicketData() (Includes Analysis)
