

# Multi Edit to Actual Utility

Last Modified on 09/03/2024 1:56 pm CDT

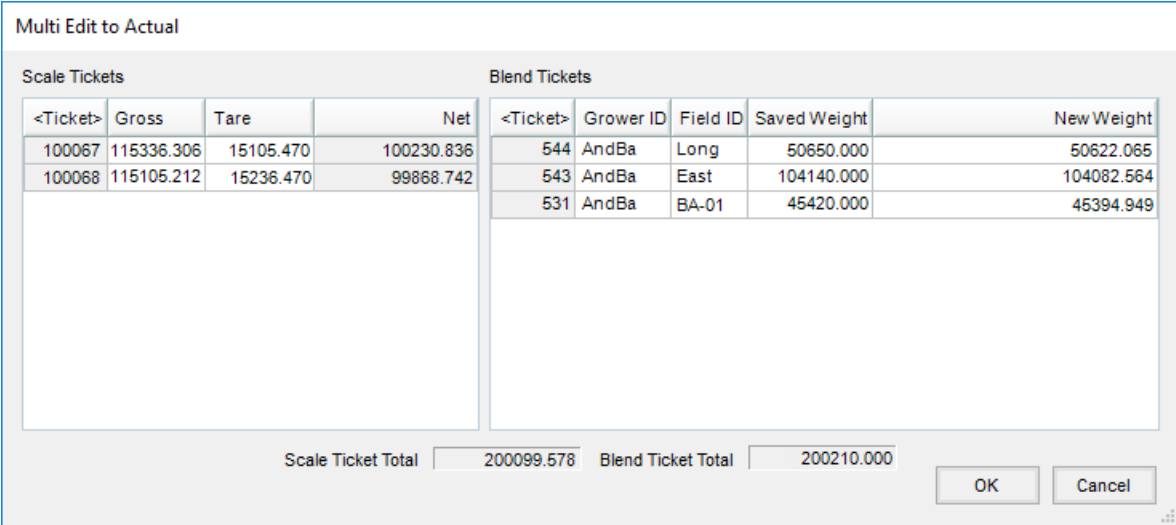

The Multi Edit to Actual utility provides the ability to update Product totals when one Scale Ticket is made for multiple Blend Tickets or one Blend Ticket is made for multiple Scale Tickets.

This utility is found at *Blending / Utilities / Multi Edit to Actual*.

- **Scale Tickets** – Double-clicking on the <Ticket> column heading allows for importing the desired Scale Ticket(s) into the *Scale Tickets* grid.
- **Blend Tickets** – Double-clicking on the <Ticket> column heading allows for importing the desired Blend Ticket(s) into the *Blend Tickets* grid.

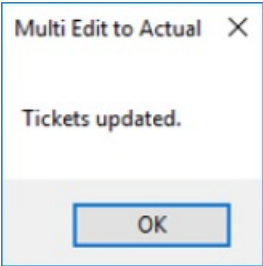

**Note:** The Blend Tickets imported into this utility do not require matching Products or analyses.

Once the desired Scale Tickets and Blend Tickets are selected, choose **OK**.

The Blend Tickets are prorated to reflect the same percentages of the individual Products compared to the total Product amounts on the original Blend Tickets. Additionally, the Blend Tickets are marked as *Loaded* and the rates per acre are updated.

A message confirming the tickets have been updated displays.

The tickets with the updated Product amounts may be viewed in the Blending module at *File / Open / Blend Tickets*.
