

Verifying MSSQL is Running on Server

Last Modified on 06/24/2025 10:49 am CDT

There are three services associated with MSSQL. Each service listed in the *Services* list needs to be running. As the *Services* are selected, the window will show the status to the right of the screen. The *Automatic* setting will cause the service to automatically start on boot-up of the server on all supported operating systems except WIN 98. The *Manual* setting will only start the service when starting the dependent program needing that service to run. The *Delayed Start* setting is the same as the *Automatic* setting, but it will delay the startup until all other *Automatic Services* have started.

Service Name	Description	Status	Startup Type	Log On As
SQL Full-text Filter Daemon ...	Service to la...	Running	Manual	NT Service...
SQL Server (MSSQLSERVER)	Provides sto...	Running	Automatic	Local System...
SQL Server Agent (MSSQLS...	Executes jo...	Running	Automatic	NT Service...
SQL Server Analysis Services...	Supplies onl...	Running	Automatic	NT Service...
SQL Server Analysis Services...	CEIP service...	Running	Automatic	NT Service...
SQL Server Browser	Provides SQ...	Running	Automatic	Local System...

If the *Services* are not showing with a *Running* status, right-click on the *Service* and select **Start** if it's showing the *Stopped* status or **Restart** to *Power Cycle*.
