

# Ammonia Grower Certification

Last Modified on 03/24/2025 2:45 pm CDT

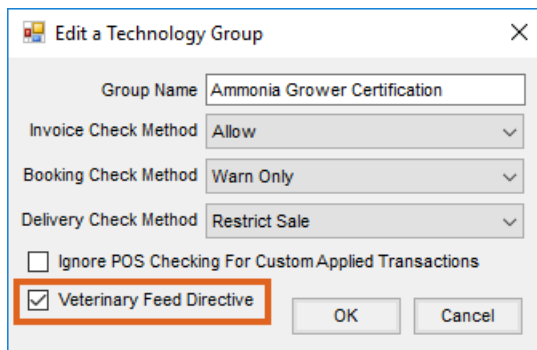

Illinois is now requiring growers to obtain an Ammonia Grower Certification to handle Ammonia as well as ammonia products. With this new certification, Agvance is storing this data for easy reference of expired certifications. The following indicates where to store this information and how to set up the certification properly.

1. Navigate to *Hub / Setup / Company Preferences* and select **Add Tech Group** on the *Product* tab.

2. Set the group name. **Ex:** *Ammonia Grower Certification*
3. Optionally set Invoices, Bookings, and Delivery Tickets to *Allow*, *Warn Only*, or *Restrict Sale* of Products with this Tech Group.

**Note:** To track the expiration date of these certifications, the *Veterinary Feed Directive* box must be checked.

4. Select **OK** and **Save** to move onto the next step.
5. Navigate to the ammonia parts, products, or any other ammonia specific materials (any product a grower would need to be certified to handle, use, or buy).

- Edit the product and set the *Technology Group* to the new ammonia certification Tech Group created earlier. Select **Save**.

**Note:** Farmhands, family members, part-time help, etc. can all be listed under one Grower. Each will have their own ammonia certification record that will need to be entered. Optionally set a name at the beginning of the license number to easily distinguish between multiple individuals. This field can only hold up to 30 characters.

11. Select **Save** when finished.
12. Choose **Save** on the Grower before closing the window completely.
