

Field Classifications - Agvance SKY Mapping

Last Modified on 07/08/2026 2:04 pm CDT

Field Classifications give the ability to group Fields with a unique name. Classifications can then be used in Agvance SKY Mapping as a filtering tool in the *Fields* panel and in reports.

Field **Classifications** are set up in Agvance Windows at *Hub / Setup / Company Preferences*. On the *Field* tab, select **Field Classifications**.

After adding the desired Classifications, go to Agvance SKY Mapping and navigate to the Field where the new Field Classification should be applied. Select the **Ellipsis** to the right of the Field name and choose *Edit Field*. Agvance SKY Mapping will zoom to the Field location and display the *General Information* panel.

Choose the *Field Classification* from the drop-down, then select **Save**.
