SKY Grain

Purchase Offer Contracts and Sales Contracts in SKY Grain

Discover new features in SKY Grain with Product Manager Garrett Sparks. Gain insights to manage Purchase Offer Contracts and Sales Contracts effectively. Learn how to add contracts, set pricing options, detail Grade Factors, and schedule deliveries to streamline your grain management processes.

Who Should Attend: Ideal for individuals seeking to improve efficiency in grain management

Cyber Security

Cyber Ready, Client Focused: Security That Supports Your Success

Learn strategies for keeping your business cyber-ready! Discover how SSI supports your success by staying ahead of cybersecurity threats and protecting both your data and ours, utilizing a proactive, multi-layered cybersecurity approach. Austin Jabs, SSI's Cybersecurity Officer, shares experiences to learn from as we work together to protect sensitive information.

Learn how:

- SOC 2 Compliance satisfies demands from your cyber insurance providers and fortifies our commitment to safeguarding data
- Managed Detection & Response (MDR) helps stop real cyber threats, and real-life stories will demonstrate how MDR works, and what it means to your business
- Recovery Readiness from SSI restores critical systems in hours, not days; learn how we've helped organizations rebuild and restore
- Employee Training strategies help every team member reinforce the human firewall
- Hosted services provide security with automatic backups, continuous MDR monitoring, and the protection of a professionally managed cloud environment

Who should attend:

Owners, managers, IT professionals, and anyone interested in taking steps to improve their business data security

Grower360

Unlock the full potential of Grower360 and enhance collaboration between your agribusiness and growers. Whether you're new to Grower360 or looking to maximize its capabilities, this webinar provides an overview of the key features. Strengthen your grower relationships, improve efficiency, and deliver a seamless digital experience for your customers with Grower360.

What You'll Learn:

- **Customizing for Your Brand** – Tailor Grower360 with your agribusiness's logo and branding for a cohesive customer experience.
- **Simplified Product Reordering** – Enable growers to conveniently reorder products with just a few clicks.

- **Requesting Agronomy Services** – Make it easy for growers to request agronomy services, ensuring timely and efficient field support.
- **Approving a Plan** – Facilitate faster decision-making by allowing growers to review and approve agronomic plans digitally.
- **Seamless Online Payments** – Provide secure, convenient payment options, helping streamline billing and transactions.
- **Electronic Signatures** – Eliminate paperwork delays by enabling digital approvals and document signing.

Who Should Attend?

- Current Agvance customers new to Grower360 or looking for a refresher to take full advantage of its features.
- Agribusiness leaders and staff interested in exploring how Grower360 can enhance grower engagement and operational efficiency.

SKY Grain

This webinar introduces SKY Grain, the latest web-based solution from Agvance, designed to transform grain management for agribusinesses.

Whether you're an existing Agvance Grain user or new to the platform, you'll gain valuable insights into how SKY Grain can revolutionize the way you manage your grain operations.

Note: Agvance Grain STLM users will have access to SKY Grain and the webinar will help you learn more about the features! If your company is not currently using STLM, converting to STLM is necessary to use SKY Grain.

In this session, you will learn:

- How SKY Grain builds on the trusted Agvance Grain foundation you rely on while incorporating new tools that address today's industry needs for tracking and processing of inbound, outbound, and futures

transactions and contracts.

- The key features of SKY Grain, including real-time customer account access, seamless grain position management, a simplified workflow through the intuitive grid layout, and enhanced grain dashboards for better decision-making and management of multiple commodities and locations.

Who should attend:

- Grain merchandisers
- Grain accountants and bookkeepers
- Agribusiness owners and managers
- Anyone interested in improving grain management efficiency

If you were unable to attend, select the link below to discover how Agvance SKY Grain can drive better outcomes for your agribusiness.

SKY Mapping

This webinar explores how SKY Mapping revolutionizes precision farming by combining a user-friendly interface with the power of cloud computing. See how SKY Mapping can help you provide the best advice on every aspect of your customers' operations and deliver superior service to your growers. Using cutting-edge tools, SKY Mapping helps you streamline your workflows, integrate data, and improve accuracy.

In this session, you will learn:

- How SKY Mapping simplifies data management with web and mobile apps.
- The new Auto-Import feature and its impact on data integration with automated retrieval from John Deere, Climate, and Raven systems.
- Seamless data management of in-field functionalities like soil sampling, scouting, and field event creation and with or without connectivity, data syncs automatically.
- Tools to create crop-specific recommendations and analysis layers for better decision-making including using profit/loss layers, crop zones, and management areas as well as tracking applications, planting, irrigation, and harvest events.
- Reporting tools to generate branded, multi-layer reports to assist growers in making data-driven decisions and engage growers with reports shared in a grower portal

Who Should Attend:

- Precision ag professionals, agronomists, agribusiness owners and managers
- Current Agvance Mapping users interested in harnessing the full potential of SKY Mapping

- Current SKY Mapping users looking to better utilize all the features in SKY Mapping

If you were unable to attend, select the link below to discover how SKY Mapping can transform your approach to precision farming.
