

# 1.5.0 | 01.12.2026

Last Modified on 01/15/2026 11:12 am CST

## Bug Fixes

- **SKYC-3875 / Lock "In Process" Tickets** – Blend Tickets set to the *In Process* status are now locked from editing throughout Agvance.
  - **Why** – This change prevents conflicting updates while a ticket is actively being worked on.
  - **When/Where** – Visible when viewing or attempting to modify an In Process ticket from SKY Dispatch.
  - **Action Needed** – No action required.
- **SKYC-3924 / Delivery Ticket Signatures** – Signature dates are now accurately captured and submitted for display on printed tickets.
  - **Why** – This ensures proof-of-delivery documents accurately reflect the exact time of sign-off, improving compliance and audit trails.
  - **When/Where** – This update is automatic for all signed Delivery Tickets and appears on the printed ticket or PDF output where the signature block is displayed.
  - **Action Needed** – No action required.
- **SKYC-3928 / Voided/Reversed Delivery Tickets** – Delivery Tickets will no longer display in the assigned Driver's Job List when voided or reversed.
  - **Why** – This update removes obsolete tasks from the driver's view, ensuring they only see active and valid jobs requiring their attention.
  - **When/Where** – This applies to the Agvance Ops Driver's Job List immediately after a ticket is marked as voided or reversed.
  - **Action Needed** – No action required.
- **SKYC-3925 / Auto-Populated Dates** – Condition results with automatically populated dates will be accepted as valid when jobs are completed.
  - **Why** – Auto-populated date fields could be flagged as incomplete, requiring manual user intervention. This ensures the system correctly recognizes these default values, streamlining the job completion workflow for Drivers.
  - **When/Where** – This applies to the app when completing a job that includes condition checklists with auto-populated date fields.
  - **Action Needed** – No action required.

## New Features

- **SKYC-3872 / Direction to Field Entrance** – *Field Entrance* is now available as a destination.
  - **Why** – This allows Drivers and Applicators to navigate directly to a field's entry point instead of the general boundary, improving efficiency and reducing confusion.

- **When/Where** – This option appears in the *Directions* menu when selecting a map destination in the Agvance Ops.
  - **Action Needed** – No action required.
- **SKYC-3910 / Job Types** – Users can only select job types they are set up for in SKY Dispatch.
  - **Why** – This ensures users only see relevant job options and menus based on their assigned role, simplifying the interface and preventing unauthorized access to other job functions.
  - **When/Where** – This applies to the *Settings* page in the Agvance Ops.
  - **Action Needed** – No action required.
- **SKYC-3786 / Job List Tabs** – New tabs are implemented to switch user types and see the number of assigned jobs for each job type.
  - **Why** – This replaces the previous drop-down selector with visible tabs, making it faster to switch between Job Lists.
  - **When/Where** – These tabs appear at the top of the Job List screen in the Agvance Ops.
  - **Action Needed** – No action required.
- **SKYC-3811 / Route Overview for Delivery Drivers** – Feature added for Delivery Drivers to view their full route.
  - **Why** – This gives Drivers a visual map summary of their entire assigned delivery sequence, allowing them to visualize their day's logistics and improve situational awareness before starting their route.
  - **When/Where** – Accessible by selecting the **Route Overview** under the menu while viewing Delivery jobs.
  - **Action Needed** – No action required.
- **SKYC-3477 / Weather Radar** – A *Weather Radar* map layer is now available on the *Full Page Map*.
  - **Why** – This displays real-time precipitation data on the job map, enabling Applicators and Drivers to make informed field and timing decisions without leaving the app.
  - **When/Where** – Accessible via the *Layers* panel on the *Full Page Map* view within the Agvance Ops.
  - **Action Needed** – No action required.
- **SKYC-3785 / Driftwatch** – The Driftwatch map layer now defaults to **Enabled** on the *Full Page Map*.
  - **Why** – This displays sensitive crop information by default to help reduce drift risk.
  - **When/Where** – The Driftwatch layer loads automatically on the *Full Page Map* in the Agvance Ops.
  - **Action Needed** – No action required. The layer can be manually turned on/off in the *Layers* panel.
- **SKYC-3775 / Product Tab** – Visual Identifiers for *Added* and *Edited* products have been added to the *Products* tab.
  - **Why** – This gives immediate visual confirmation of Product list changes, encouraging review before completing the job or ticket.
  - **When/Where** – These *Info Chips* appear next to specific line items on the *Products* page in the Agvance Ops when a product is manually added or edited.

- **Action Needed** – No action required.
- **SKYC-3861 / Razor Tracking** – Integrated devices will display with the *Full Page Map* layer.
  - **Why** – View real-time locations of Razor Tracking equipped vehicles on the job map alongside other field data.
  - **When/Where** – Visible on the *Full Page Map* in the Agvance Ops when the *Integrations* layer is toggled on in the map options.
  - **Action Needed** – Admin must first configure Razor Tracking devices in the Integrations Setup area at *SKY Admin / Dispatch* and link them to vehicles in *Company Settings*.
- **SKYC-3922 / Humidity Conditions** – The Humidity value will be automatically captured along with other weather conditions.
  - **Why** – Automatically captures required environmental data without manual entry.
  - **When/Where** – This occurs automatically in the Agvance Ops when **Start and Capture** or **Capture and Review** is selected.
  - **Action Needed** – No action required.
- **SKYC-3926 / Default My Location on Job Maps** – The *My Location* blue dot will default as enabled on job maps.
  - **Why** – Displays the user's location by default on the *Job Overview* and *Full Page Map*.
  - **Action Needed** – No action required.
- **SKYC-1919,1920,2454 / Additional Documentation** – View Hazmat, SDS, and WPS documentation.
  - **Why** – This ensures critical safety and compliance documents are readily available to Applicators and Drivers directly within the job workflow, helping them stay informed about hazardous materials and handling requirements in the field.
  - **When/Where** – Hazmat, SDS, and WPS documents are available when viewing job details by selecting the **Ellipsis** then **Export Documents**.
  - **Action Needed** – No action required.
- **SKYC-3828 / Tender Driver Permissions** – Tender Drivers are prevented from deleting linked assignments.
  - **Why** – This prevents Tender Drivers from removing jobs tied to an Applicator's schedule, preserving the Dispatcher's plan.
  - **When/Where** – This applies to the Job List, where swipe-to-delete is disabled for all linked tender jobs.
  - **Action Needed** – No action required.
- **SKYC-3869 / Vision of Tender Drivers(s) in Applicator's Job Overview** – Applicators can now view assigned Tender Drivers within the *Job Overview*.
  - **Why** – This lets Applicators see which Drivers support their job for better coordination.
  - **When/Where** – Assigned Tender Drivers are listed on the *Job Overview* screen for the specific job.
  - **Action Needed** – No action required.
