

Satloc Aerial Integration - Agvance SKY Dispatch

Last Modified on 07/07/2026 9:23 am CDT

The Satloc Integration gives the ability to manually upload. Job files to Satloc and assign aircraft to the jobs directly from Agvance SKY Dispatch.

Setup in Agvance SKY Admin

An administrator must first enable the integration by entering the required API credentials.

1. Navigate to *Agvance SKY Admin / Dispatch*.

The screenshot shows the 'Dispatch Management' interface. Under the 'Integrations Setup' section, there are several input fields for API keys and credentials. The 'Satloc Username' and 'Satloc Password' fields are highlighted with a red border. Below the input fields, there is a blue button labeled 'My John Deere Login' and a red text label 'Not Logged In'.

2. In the *Integrations Setup* section, enter the *Satloc Username* and *Satloc Password*.

Note: A Satloc Username and Password will need set up as a Vendor user within the Satloc Cloud prior to establishing a connection.

3. Select the **Edit** icon to save the username and password.
4. Once the login is validated, it will save.

Note: The *Satloc* credentials can be removed after validation by selecting the **Delete** icon.

Setup in Agvance SKY Dispatch

1. Navigate to *Agvance SKY Dispatch / Company Settings / Integrations*.
2. Select **+ Add Integration**.
3. Complete the setup fields:
 - **Vehicle** – Select the Vehicle to link.
 - **Integration Type** – Select *Satloc*.
 - **Machine ID** – Select the unique identifier of the Satloc asset.
 - **Machine Alias** – This defaults as *Machine ID* but can be edited.
 - **Map Icon** – Choose a visual icon to represent the asset.
