May 2026 Agvance SKY Release Notes

Last Modified on 08/06/2026 11:56 am CDT

Analytics

- **AN-3718 / Tank Delivery History Dashboard** – The Tank Delivery History dashboard can now be filtered by Driver.
  - **Why** – This makes it more efficient to see sales information for Energy Products by Driver.
  - **When/Where** – *Driver Name* has been added to the *Filters* area of the Tank Delivery History dashboard which is found under *Energy*.
  - **Action Needed** – No action required.
- **AN-3730 / Payment Register Dashboard** – The Payment Register dashboard is now available in SKY Analytics, providing a centralized view of Payment activity and giving the ability to track payment amounts, methods used, and transactions paid.
  - **Why** – This dashboard provides a Payment listing with the ability to drill into Payments for additional details.
  - **When/Where** – This dashboard can be found under *Accounts Receivable* in SKY Analytics.
  - **Action Needed** – No action required.
- **AN-3745 / Tank User Defined List Dashboard** – The Tank User Defined List dashboard provides a view of key maintenance and activity dates for each Tank based on the User-defined date fields set up in Energy.
  - **Why** – This gives the ability to track the last time the Tank was tested for a leak.
  - **When/Where** – This dashboard can be found under *Energy* in SKY Analytics.
  - **Action Needed** – Set up User-defined date labels at *Energy / Setup / User Defined Tank Data Headings*.
- **AN-3742 / Sales Commission Dashboard** – The Sales Commission dashboard now displays the Invoice Date as the Paid Date where the Invoice is marked as paid due to prepay or a $0 price.
  - **Why** – This gives the ability to track Prepay Invoices.
  - **When/Where** – The Sales Commission dashboard is found under *Accounts Receivable* in SKY Analytics.
  - **Action Needed** – No action required.
- **AN-3741 / Dormant Customer Analysis Dashboard** – The Dorman Customer Analysis dashboard is now available in SKY Analytics.
  - **Why** – This dashboard identifies Customers with zero Regular/Prepay/UAC balances, no AR activity, and no Patronage across multiple years.
  - **When/Where** – This dashboard is available under *Customer* in SKY Analytics.
  - **Action Needed** – No action required.

Energy

- **SKYR-1182 / View More Button** – A **View More** button has been added to the *Daily Fuel* page and redirects to the *Tanks* page with a view of more critical tanks, within the entire dataset, filtered by *Scheduled Delivery* in the *Delivery Type* column and sorted by lowest *Estimated Left* (%) readings first.
    - **Why** – To allow more visibility on critical tanks outside the 6 most critical Schedule Delivery tanks on the *Daily Fuel* page.
    - **When / Where** – *SKY Energy / Daily Fuel / Schedule Route tab*
    - **Action Needed** – No action required.
- **SKYR-1195 / Page Filter for Schedule Route** – To filter down the *Schedule Route* list view by *Location*, *Status*, *Driver*, *Tank Type*, *Region*, *Route*, *Product*, *Out of Gas*, and *Date* (Call In Date, Due Date, Scheduled Date, Completed Date).
    - **When / Where** – *SKY Energy / Route Management*
    - **Action Needed** – No action required.
- **SKYR-1276 / Last Delivery Gauge** – The Last Delivery Gauge field on the *Add/Edit Tank* form accepts a percentage over 80, up to 100%.
    - **Action Needed** – No action required.
- **SKYR-1280 / Edit Current Tank % on Open PDOs** – Current Tank Percent on Open Product Delivery Orders can be edited.
    - **Why** – To provide the same functionality as Energy Force desktop.
    - **Action Needed** – No action required.

Mapping

Version 6.09

Web

- **HW-7784 / Export Controller Files** – The *Merge Files* checkbox on a *Batch Controller Export* has been removed and a *Per File Options* drop-down was added below the *File Name Format* drop-down. Based on the selection from this drop-down, the Controller File merges all selected Recs. Options in this new drop-down include *Field* (current behavior of *Merge Files* not checked), *Farm* (creates a Controller File per Farm Name per Customer), *Grower* (creates a Controller File and Load Sheet per Customer), and *All Growers* (current behavior with *Merge Files* checked).
    - **Why** – This gives the ability to merge Controller Files of many Fields of the same Farm.
    - **When/Where** – With multiple Fields selected, navigate to the *Recs* tab, choose the vertical **Ellipsis**, then select *Export Controller Files* to see these new options.

    - **Action Needed** – No action required.
- **HW-12253 / Zone Sampling** – An option called *Manual Zones* was added in SKY Mapping for all Field-based Sampling Event types (Soil, Tissue, Nematode). When selected, a legend title of *Manual Zones* is displayed and a numeric class name for each Zone added starting with the number *1*. Zones added will use the Soil Type Color Ramp by default.
    - **Why** – This gives the ability to add Zones manually.
    - **When/Where** – The Manual Zones option is found in the context menu to the right of the *Display Layer* drop-down.
    - **Action Needed** – No action required.
- **HW-12432 / Owner Branding Logo** – A Branding Report Logo option is now available which adds a *Branding Report Logo* section to the Location level profile below the report logo.
    - **Why** – This accommodates large organizations with unique branding for other parts of the Owner.
    - **When/Where** – This option was added to the *Add/Edit Levels* area on the Owner profile for any Org Levels added when *Allow Branding* is enabled.
    - **Action Needed** – Ensure *Allow Branding* is enabled.
- **HW-12445 / Sampling Events** – Multi-depth Sampling Events surface and display as expected.
    - **Why** – An error resulted when attempting to load the surfaces in the Split Screen Compare tool.
    - **Action Needed** – No action required.
- **HW-12528 / Batch Edit Field Details** – Two new options were added called *Add* and *Remove*. With *Remove* selected, all drop-downs are removed except for *Field Classification* for Agvance-connected Owners. Attribute labels were added for *Crop* (clears Fields with *Crop Purpose*), *Crop Purpose* (child of *Crop*), *Irrigated* (clears Fields with *Irrigation Type*), and *Irrigation Type* (child of *Irrigated*). Each of these Attributes has a *Clear All* checkbox that clears all values for the selected Fields for that Attribute. All values selected with the Field Classification multi-select are removed for all selected Fields.
    - **Why** – This gives the ability to batch remove Field Classifications when needed.
    - **When/Where** – The *Add* and *Remove* options were added to the top of *Batch Edit Field Details*.
    - **Action Needed** – No action required.
- **HW-12591 / Field Setup Agvance Integration** – Agvance Integration works as expected when adding a Field.
    - **Why** – This was resulting in incomplete records.
    - **Action Needed** – No action required.

Version 6.08

Web

- **HW-11375 / Batch Manual Events or Recs** – Batch Planting Events and Recs perform as expected.

    - **Why** – There was a long wait time for batch processing.
    - **Action Needed** – No action required.
- **HW-12268 / Sampling Merge Events** – Merge Events for Sampling Events work as expected.
    - **Why** – Zones on Fields were not appearing as expected.
    - **Action Needed** – No action required.
- **HW-12437 / SKY Soil Test Report** – The Per Report option, allowing multiple Fields on the same map, works as expected. Additionally, the Per Report options for Grower and Farm selection supports Zone Sampling as expected.
    - **Why** – A blocking error was occurring when using the SKY Soil Test report.
    - **Action Needed** – No action required.

Mobile

- **HW-12176 / Batch Sampling** – Batch Sampling works as expected.
    - **Why** – Points on Fields were not appearing as expected when composite sampling.
    - **Action Needed** – No action required.
- **HW-12338 / Multi-Field List Selection** – A new **List Selection** icon was added below the **GPS Location** icon on all workflows. This opens a window with checkboxes to the left of the Customer and Field. Selecting the input to the left of a Customer selects all Fields for the Customer. Checkboxes to the left of Fields can be used to select individual Fields.
    - **Why** – This alleviates the need to select Fields individually for Batch processing.
    - **When/Where** – The **List Selection** icon is below the **GPS Location** icon on all workflows.
    - **Action Needed** – No action required.

Order

- **SKYD-538 / Product Sets** – Product Sets can now be added/edited in SKY Order.
    - **Why** – This gives the ability to manage Product Sets while remaining in Agvance SKY.
    - **When/Where** – **Product Sets** are maintained in SKY Order under *Utilities* in the left navigation.
    - **Action Required** – Company Admins will need to enable the *Utilities - Blending Product Set Management* permission in SKY Admin per User.
- **SKYD-870 / Blends/Plans Matching Products** – If using a Template that is company-wide and has Products from a Location other than the Ticket Location, SKY Order will find the matching Product(s) for the Location where the Template is being applied using the Product ID and Inventory Department Category.
    - **Why** – This gives the ability to choose which Product should be used on the transaction when there are multiple Product matches.
    - **When/Where** – This can be seen when using a company-wide Template with Products from a Location

other than the Location on the transaction.
    - **Action Needed** – No action required.
- **SKYD-444 / Edit Product Set from Order Form** – Product Sets can be edited when adding/editing a Blend, Plan, or Template.
    - **Why** – This gives the ability to make edits to the Product Set without needing to leave the transaction page.
    - **When/Where** – When adding/editing Blends, Plans, or Templates, there is an **Edit Product Set** button in the *Order Details* section.
    - **Action Needed** – Product Sets are set up under *Utilities* found in the left navigation of SKY Order. Company Admins will need to enable the *Utilities - Blending Product Set Management* permission in SKY Admin per User.
- **SKYD-1271 / Paying a Booking Transaction List** – Payments on Bookings can now be initiated from SKY Order.
    - **Why** – This makes paying a Booking more efficient.
    - **When/Where** – A **Pay Booking** button/column has been added to the ***Bookings* grid**.
    - **Action Needed** – Permission to take a Payment in SKY Customer must be enabled in SKY Admin to use this feature.
- **SKYD-1352 / Paying a Booking from Adding/Editing** – A new option is available when adding/editing a Booking to *Take Payment upon Creation of this Booking*.
    - **Why** – This makes paying a Booking more efficient.
    - **When/Where** – This option is available under the *Notes* section when adding/editing a Booking in SKY Order.
    - **Action Needed** – Permission to take a Payment in SKY Customer must be enabled in SKY Admin to use this feature.
