Bug Fixes

- **SKYC-4147 / Target Pests Missing from BT** – Blend Ticket Target Pests and their condition values are now retained and visible within Agvance Ops during active jobs and at completion.
 - **Why** – Previously, Target Pest values submitted on Blend Jobs outside of Agvance Ops were being removed from the ticket when viewed in the app.
 - **When/Where** – When viewing Blend Ticket details and Target Pest information in Agvance Ops.
 - **Action Needed** – No action required.
- **SKYC-4151 / End Time Before Start Time** – Jobs that span multiple days can now be completed successfully. The system now properly compares both the day and time when validating job end times.
 - **Why** – Previously, if the end time was numerically *before* the start time, users received an error message even when the job legitimately spanned multiple days.
 - **When/Where** – When completing a job in Agvance Ops, where the end time occurs on a different day than the start time.
 - **Action Needed** – No action required.
- **SKYC-4078 / Samsara Displaying Last Known Location** – *Last Known Locations* of integrated Samsara devices are now displayed for all known locations, expanding upon previous functionality.
 - **Why** – Previously, only Samsara equipment with recently captured locations were displayed on the map, limiting visibility into device locations.
 - **When/Where** – When viewing or editing the Products tab for Blend Jobs with liquid or suspension products in Agvance Ops.
 - **Action Needed** – No action required.

New Features

- **SKYC-4160 / Blend Ticket Total Gallons/Mix for Liquid Jobs** – For Blend Tickets with a Product Set of "Liquid" or "Suspension", the total quantity on the Products page now displays as Total Gallons/Mix instead of Total Pounds.
 - **Why** – This provides clearer labeling for liquid products, ensuring users immediately see the correct unit of measurement for products.
 - **When/Where** – When viewing or editing the Products tab for Blend Jobs with *Liquid* or *Suspension* products in Agvance Ops.
 - **Action Needed** – No action required.
- **SKYC-4176 / Vehicle Assigned to a Single Tender** – Restrictions have been implemented to prevent multiple Tender Drivers from utilizing the same vehicle simultaneously. Users are prompted to confirm

before assigning a vehicle that is already assigned to another Tender Driver.

- **Why** – This ensures clear vehicle accountability and prevents scheduling conflicts or overlapping assignments that could impact job execution.
- **When/Where** – When a Tender Driver attempts to assign a vehicle that is currently assigned to another driver in SKY Dispatch.
- **Action Needed** – No action required.
- **SKYC-4137 / Minimum Operating System Requirements** – The minimum operating system versions required to use Agvance Ops have been updated to ensure compatibility with current, supported systems.
 - **Why** – Updated minimum OS requirements ensure users have access to current security patches and system stability improvements.
 - **When/Where** – When downloading or updating Agvance Ops from the app store.
 - **Action Needed** – Users must ensure their device is running the supported operating systems to download or use the app. New minimum requirements are:
 - iOS 15.8.7 or later
 - Android Version 11 or later
