Agvance Warehouse

Manage Inventory with Efficiency & Accuracy

Agvance Warehouse uses mobile technology to manage inventory efficiently and accurately in agronomy warehouses and agricultural retail stores.

Real-time access to inventory levels and customer orders lets you know what you have and what you need.

Quickly fulfill orders, receive product, and perform physical inventory via scanners to eliminate costly mistakes and take your customer service to a higher level.

INBOUND SHIPMENTS RECEIVED

- Create or edit Bills of Lading adding products, quantity, lot numbers, and containers
- Receive products by location
- Search products by name, bar code, favorites, or lot number
- Scan bar codes using either the device camera or Bluetooth
- Receive an electronic ship notice to import products and quantities automatically
- Add a new container
- Auto-populate the Product Lot Number for Electronic Delivery Notices (EDNs) from business-to-business vendors on a new Bill of Lading
- Choose from two inbound receiving styles and accommodate either an agriculture location or a retail store

OUTBOUND SHIPMENTS LOADED

- Create new Delivery Tickets or pick and load product on existing Delivery Tickets
- Edit or view Delivery Tickets by scanning a printed Delivery Ticket or scan a customer bar code to see all tickets for the customer
- View visual indicators on the Delivery Ticket for status and staff assignments
- Sort Delivery Tickets by Assigned to Me, or search by customer or ticket number
- Assign containers and select or add lot numbers from a list of options
- Calculate product Available for Sale
- View and print safety documents, permits, expiration dates, and notes
- Designate fulfillment of orders by assigning users or Ship From Location
- Capture customer signatures on a tablet, phone, or delivery ticket
- Create intercompany transfers from Ship To on tickets
- Receive a notification when adding a Delivery Ticket for customers with a credit status of COD Only and require a reason to override

INVENTORY IN REAL-TIME

- Track inventory quantities that are Available for Sale by product and location
- Record physical inventory counts by typing a product name or scanning a barcode and multiple staff can add or update product quantities
- Update inventory from incoming and outgoing tickets
- Adjust quantity at the time of loading for returns or reassignment of inventory
- Display On Hand, Available for Sale, On Order, Unused Booked, and Undeliverable quantities and costs
- Update or add bar codes for products

REFILLABLE CONTAINER MANAGEMENT

- Access the Contain App from within the Warehouse App
- Search or scan a barcode to locate the container
- Record real-time container activities to comply with refillable container requirements

ADDITIONAL FEATURES

- Access the app from both iOS and Android phones and tablets
- Create lists of Favorite Products, Customers, and Locations for easy access
- View Customer contact information and dial from cellular devices
- Assign tickets to other users
- Check permits for restricted products
- Check a customer's credit and identify customers in warning ranges or exceeding limits
- Take physical inventory counts by quickly scanning barcodes
- View assigned staff information in Warehouse as assigned in SKY Order when creating or editing orders
